Suitable for heavy curtains, the Silent Gliss 1280 uses a roller glider to ensure that no matter what the weight of curtain the track still runs smoothly and efficiently. The roller glider sits in the front edge of the track to ensure there is also no dust build up which can hamper the running of other brands. The roller glider also produces less friction which makes the Silent Gliss 1280 the market leading uncorded curtain track. The 1280 curtain rail is also suitable for bay windows and can be bent to suit any bay window by our trained engineers.

The Silent Gliss 6010 is a slim, oval shaped curtain track suitable for medium weight curtains and compatible with the wave heading system. The track profile measures just 16mm from top to bottom so is ideal if you don't have much room above your window or door for a deeper track. An upgrade to roller gliders makes the track suitable for heavier curtains so please select 'roller gliders' if your curtains are on the heavy side. Purpose designed for ceiling fixing but the Silent Gliss smart fix wall brackets are also available. Available in White or Black. The 6010 curtain rail is also suitable for bay windows and can be bent to suit any bay window by our trained engineers.

Silent Gliss 6840 curtain track is a neat, attractive curtain track suitable for medium weight curtains and compatible with the wave curtain heading available in 7 contemporary colours. An upgrade to roller gliders makes the track suitable for heavier curtains so please select 'roller gliders' if your curtains are on the heavy side. Purpose designed for ceiling fixing but face fix brackets are also available. This track has the same appearance from both sides so is suitable as a room divider. The profile is curved slightly so looks aesthetically appealing. The 6840 curtain rail is also suitable for bay windows and can be bent to suit any bay window by our trained engineers.

Silent Gliss 6243 has been designed to be recess fitted into a ceiling. It is suitable for light to medium weight curtains and can be bent to suit bay windows in our factory using special tooling. Pre punched holes in Silent Gliss 6243 allow the track to be screwed up through the track into a ceiling recess. The Silent Gliss 6243 is also suitable for use with the wave gliders. The perfect track for recess fixing.

The 3900 Curtain Track from Silent Gliss is the best available, it is the top of the range in corded curtain tracks. The 3900 curtain track comes as standard with roller gliders that instead of sliding along the track, roll along the edge to make the working of the track much easier and smoother. It has separate cording channels to contain the cords preventing them from coming out thus removing the need for tension pulleys to hold the cord tight. This also allows the track to be bent and reverse bent. This all combines to make the Silent Gliss 3900 suitable for heavyweight curtains capable of carrying up to 22kg in curtain weight. The Silent Gliss 3900 is a superb curtain track. It can be bent by our engineers to fit all bay window shapes.

Silent Gliss 3840 curtain track is a neat, attractive corded curtain track suitable for medium weight curtains and compatible with the wave curtain heading available in 7 contemporary colours. An upgrade to roller gliders makes the track suitable for heavier curtains so please select 'roller gliders' if your curtains are on the heavy side. Purpose designed for ceiling fixing but face fix brackets are also available. This track has the same appearance from both sides so is suitable as a room divider. The profile is curved slightly so looks aesthetically appealing. The 3840 curtain rail is also suitable for bay windows and can be bent to suit any bay window by our trained engineers.

What differentiates Metropole from a traditional curtain pole? Metropole features an internal gliding channel, avoiding the need for curtain rings, giving the appearance of a pole but the ease and usability of a track. Metropole is uncompromising in bringing together precision engineering with considered product design for a curtain pole that performs as well as it looks. From the unique two-component glider to the seamless finial connection, each element is carefully designed to deliver something remarkable. Offered in 3 round pole diameters (23, 30 and 50mm), and a rectangular profile (36mm), Metropole is available hand, cord or electrically operated. Metropole can be bent to suit bay and 'L' shaped windows. It is suitable for all curtain headings including Silent Gliss Wave.

Contemporary

The perfectly understated Taper and the striking Ellipse finials lend themselves to contemporary settings, with a fluted design that complements a range of architectural interiors. No longer a pastiche of the finial as a ‘curtain-stopper’, they offer an aesthetic fit for a 21st century home.

Taper in Taupe

Ellipse in Ochre

Endcaps

When a more pared-down look is preferred, endcaps are an alternative finish to finials. Flush and Stud endcaps are available across all shapes and sizes of pole. The Design endcap is available for round poles.

Flush endcap in Silver Anodised

Stud endcap in Slate Grey

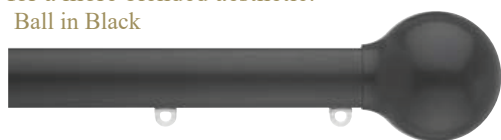

Design endcap in Gunmetal

Traditional

Metropole offers a range of traditional finial designs, creating a natural union with period homes. Darker coloured poles suit bay windows, or choose a lighter shade for a more blended aesthetic.

Made to Measure Tracks Order Form - Part 1 of 3

(If ordering a bent track, please also complete part 2 "Bay window measurements")

Account Number:	Date:
Account Name:	
Your order reference:	
Delivery Address: <small>(if left blank we will assume that delivery is to your standard delivery address)</small>	
Eircode:	

Any additional information:

*** IN ORDER TO CONFORM TO BS EN 13120 CHILD SAFETY LEGISLATION:**

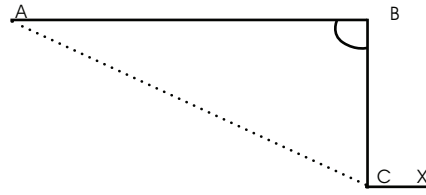

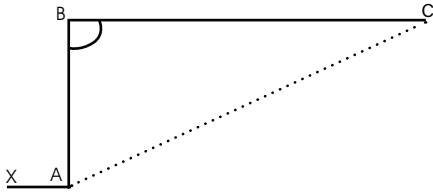

Installation Height - In order to conform to child safety legislation; your chain drop must be at least 150cm less than your installation height (i.e. the bottom of cord must be 1.5m from the floor)

** We recommend that bent tracks over 300cm and straight tracks over 400cm are corded at both ends, as this significantly increases the weight capacity of the system

ALL TRACKS						CORDED TRACKS ONLY *** See important info (above) ***				METROPOLE ONLY

Single internal bend, with or without return

These diagrams are for representation purposes, we understand that these diagrams may not be a true representation of the actual shape of your bay

Internal facets (cm):	
A-B	
B-C	
Return facet* (cm):	
A/C-X	

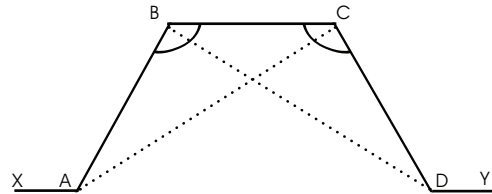

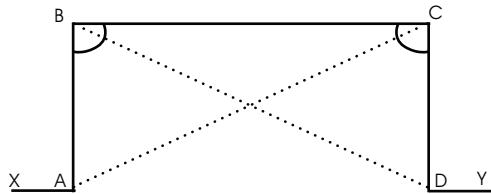

Angle:	
B	
Return angle**:	
A/C	

Cross diagonal (cm):	
A-C	

Measurements are:	
Wall size	
Back of rail	
Centre of rail	
Front of rail	

Two internal bends - Square or played, with or without returns

These diagrams are for representation purposes, we understand that these diagrams may not be a true representation of the actual shape of your bay

It is not necessary to supply both angles and diagonals, although supplying both does provide a good cross check

Internal facets (cm):	
A-B	
B-C	
C-D	
Return facets* (cm):	
A-X	
D-Y	

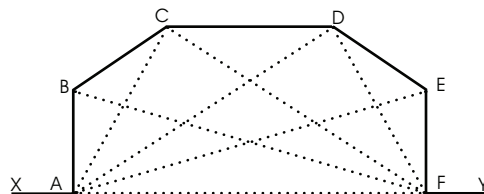

Angles:	
B	
C	
Return angles**:	
A	
D	

Cross diagonals (cm):	
A-C	
B-D	
A-D	

Measurements are:	
Wall size	
Back of rail	
Centre of rail	
Front of rail	

Four internal bends, with or without returns

These diagrams are for representation purposes, we understand that these diagrams may not be a true representation of the actual shape of your bay

It is not necessary to supply both angles and diagonals, although supplying both does provide a good cross check

Internal facets (cm):	
A-B
